

Eialid Ahmed Joy

SOFTWARE DEVELOPER | API & BACKEND

Software developer with 3+ years of professional software development experience building and supporting REST APIs in Java and Spring Boot for production banking and fintech systems. I have spent most of my career on customer-facing integrations, end-to-end debugging, and problem-solving in live systems that handle high transaction volumes. Strong with object-oriented programming, AWS, JUnit testing, code reviews, and CI/CD. Master of Applied Science in Software Engineering (4.0 GPA) from Memorial University of Newfoundland. I work well in collaborative, cross-functional teams alongside vendors and stakeholders, and I take pride in catching problems early through good monitoring and clear communication.

SKILLS & COMPETENCES

Languages	Java, JavaScript, TypeScript, Python, SQL, HTML/CSS
Backend & APIs	Spring Boot, REST APIs, Object-Oriented Programming, Microservices, API Integration, API Operations, API Design
Cloud & DevOps	AWS (EC2, S3, Lambda, API Gateway, CloudWatch, DynamoDB, RDS, Bedrock, Textract, Comprehend), Docker, CI/CD (Jenkins), Linux
Monitoring & Reliability	CloudWatch, Logging, Alerts, Dashboards, Production Debugging, Incident Response, Root Cause Analysis
Databases	Oracle, PostgreSQL, DynamoDB, MySQL, SQL Query Optimization, Data Modeling
Testing	JUnit, Automated Testing, Test-Driven Development (TDD), Code Review
Frontend	React, HTML/CSS, Responsive Design
Tools & Practices	Git, Jenkins, Agile/Scrum, Technical Documentation, Customer-Facing Communication
Soft Skills	Strong Problem-Solving Skills, Analytical Thinking, Collaborative, Cross-Functional Teamwork, Attention to Detail
Currently Exploring	Terraform, Infrastructure as Code

WORK EXPERIENCE

Software Developer – Core Banking Systems

Business Accelerate BD Ltd. | 11/2021 – 02/2024

Dhaka, Bangladesh

- Built and supported REST APIs in Java and Spring Boot for core banking and payments systems, including a remittance platform that handles over one million daily transactions across multiple banks and financial institutions.
- Acted as a technical point of contact for customer integrations, vendor APIs, and internal teams investigating production issues, debugging complex API errors across distributed services, and shipping bug fixes and enhancements that kept customer-facing systems running smoothly.
- Wrote unit and integration tests with JUnit, followed test-driven development practices on critical flows, and helped run code reviews to keep quality high across the team.
- Set up Jenkins CI/CD pipelines for automated builds, tests, and containerized deployments to Linux production environments, making releases faster and easier to roll back when needed.
- Worked closely with QA, support, and project managers as part of a collaborative, cross-functional team gathering requirements from stakeholders, explaining technical decisions in plain language, and handling end-to-end incident response when production APIs ran into trouble.

Research Assistant

Memorial University of Newfoundland | 01/2025 – 12/2025

St. John's, Canada

- Built a geospatial data viewer with a React frontend and Python/Django backend, enabling researchers to explore large radar archives through REST APIs and PostgreSQL queries.
- Improved ML models for satellite imagery classification and authored documentation so the next student could pick up the work without help from me.

Software Developer Trainee

Business Accelerate BD Ltd. | 05/2021 – 10/2021

Dhaka, Bangladesh

- Worked on banking application features in Java and React under senior engineers, learning OOP, microservice architecture, and the team's Git and Agile workflow.

EDUCATION

Master of Applied Science in Software Engineering

Memorial University of Newfoundland | 09/2023 – 12/2024

St. John's, Canada

- GPA: 4.0/4.0 — Awarded Fellow of the School of Graduate Studies (Spring 2024).

Bachelor of Science in Computer Science

BRAC University | 03/2016 – 08/2020

Dhaka, Bangladesh

KEY PROJECTS

Remittance Management System

Java, Spring Boot, Oracle, REST APIs, Microservices

- Built REST APIs for a banking platform that processes over one million daily transactions across multiple banks. Designed endpoints for transaction submission, status tracking, and reconciliation, with reliability and uptime as first-class requirements.
- Investigated production issues by digging through application logs, query plans, and metrics fixing root causes and shipping targeted patches that kept the API stable under heavy load.
- Built React dashboards used by operations teams to monitor transaction health and spot issues early, before customers noticed.

Automated Resume Analyzer — techNL Capstone | [Live Demo](#)

Python, AWS Lambda, S3, API Gateway, Textract, Comprehend, Bedrock, DynamoDB, CloudWatch

- Built and deployed a public REST API on AWS using API Gateway and Lambda, with structured JSON logging and CloudWatch alarms to spot issues before they affect users.
- Set up event-driven Lambda triggers, dead-letter queues for resilience, and scoped IAM policies and shipped the system as a publicly accessible HTTPS endpoint backed by versioned source on GitHub.
- Modeled DynamoDB access patterns for fast lookups and integrated Bedrock for AI-driven scoring, giving me hands-on experience with both API design and live cloud operations.

BIRMS – Government Revenue System (Bhutan)

Java, Spring Boot, REST APIs, Microservices

- Built REST API services for the national revenue management system used by the Government of Bhutan, with audit and reliability requirements appropriate for regulated government finance work.
- Trained 6–7 of their IT staff on the system architecture, deployment, and day-to-day operations during handover; explaining technical decisions to a customer team that wasn't part of the original development.

Liability & Asset Workflow System

Java, Spring Boot, Oracle, REST APIs, React

- Built REST API services and React interfaces for account opening, cheque book issuance, and digital banking modules used daily by operations staff.
- Designed Oracle data models, optimized SQL queries (40% faster retrieval), and supported multi-step workflow approvals with full audit trails.

ADDITIONAL WORK EXPERIENCE

Food Service Supervisor

Tim Hortons | 10/2023 – Present

St. John's, Canada

- Supervised a team of 8–10 employees, improved team efficiency by 20%, and cut onboarding time by 30%; built leadership and time-management skills alongside graduate studies.
